HW #7
Dues: Dec. 1st - No late submission allowed

Objective: Be familiar with arrays and user-defined data types (classes)

Description: You are required to implement a phone directory. Your program should have an array storing phone records (object). The user should be presented with 3 options: 1) add a new phone record, 2) search for a phone record by either name or phone number, and 3) quit.

The phone record is represented as a class with the following data members:
+ name
+ phone number

Use the given skeleton to complete your code.
